Lectures on Probability Theory and Mathematical Statistics

3rd Edition

Marco Taboga

Contents

I Mathematical tools 1

1 Set theory 3
1.1 Sets . . . 3
1.2 Set membership . . . 4
1.3 Set inclusion . . . 4
1.4 Union . . . 5
1.5 Intersection . . . 6
1.6 Empty set . . . 6
1.7 Complement . . . 6
1.8 De Morgan's Laws . . . 7
1.9 Solved exercises . . . 8

2 Permutations 11
2.1 Permutations without repetition . . . 11
2.1.1 Definition of permutation without repetition . . . 11
2.1.2 Number of permutations without repetition . . . 12
2.2 Permutations with repetition . . . 13
2.2.1 Definition of permutation with repetition . . . 13
2.2.2 Number of permutations with repetition . . . 13
2.3 Solved exercises . . . 14

3 k-permutations 17
3.1 k-permutations without repetition . . . 17
3.1.1 Definition of k-permutation without repetition . . . 17
3.1.2 Number of k-permutations without repetition . . . 18
3.2 k-permutations with repetition . . . 19
3.2.1 Definition of k-permutation with repetition . . . 19
3.2.2 Number of k-permutations with repetition . . . 20
3.3 Solved exercises . . . 21

4 Combinations 23
4.1 Combinations without repetition . . . 23
4.1.1 Definition of combination without repetition . . . 23
4.1.2 Number of combinations without repetition . . . 24
4.2 Combinations with repetition . . . 24
4.2.1 Definition of combination with repetition . . . 25
4.2.2 Number of combinations with repetition . . . 25
4.3 More details . . . 27
4.3.1 Binomial coefficients and binomial expansions . . . 27

Copyrighted Material

4.3.2 Recursive formula for binomial coefficients 27
4.4 Solved exercises 27

5 Partitions into groups **29**
5.1 Definition of partition into groups 29
5.2 Number of partitions into groups 30
5.3 More details 31
5.3.1 Multinomial expansions 31
5.4 Solved exercises 32

6 Sequences and limits **33**
6.1 Definition of sequence 33
6.2 Countable and uncountable sets 34
6.3 Limit of a sequence 34
6.3.1 The limit of a sequence of real numbers 34
6.3.2 The limit of a sequence in general 36

7 Review of differentiation rules **41**
7.1 Derivative of a constant function 41
7.2 Derivative of a power function 41
7.3 Derivative of a logarithmic function 42
7.4 Derivative of an exponential function 42
7.5 Derivative of a linear combination 43
7.6 Derivative of a product of functions 43
7.7 Derivative of a composition of functions 44
7.8 Derivatives of trigonometric functions 45
7.9 Derivative of an inverse function 45
7.10 Solved exercises 46

8 Review of integration rules **49**
8.1 Indefinite integrals 49
8.1.1 Indefinite integral of a constant function 50
8.1.2 Indefinite integral of a power function 50
8.1.3 Indefinite integral of a logarithmic function 51
8.1.4 Indefinite integral of an exponential function 51
8.1.5 Indefinite integral of a linear combination of functions 51
8.1.6 Indefinite integrals of trigonometric functions 52
8.2 Definite integrals 52
8.2.1 Fundamental theorem of calculus 52
8.2.2 Definite integral of a linear combination of functions 53
8.2.3 Change of variable 54
8.2.4 Integration by parts 55
8.2.5 Exchanging the bounds of integration 55
8.2.6 Subdividing the integral 55
8.2.7 Leibniz integral rule 56
8.3 Solved exercises 56

Copyrighted Material

9 Special functions 59
9.1 Gamma function . . . 59
9.1.1 Definition . . . 59
9.1.2 Recursion . . . 60
9.1.3 Relation to the factorial function . . . 60
9.1.4 Values of the Gamma function . . . 61
9.1.5 Lower incomplete Gamma function . . . 62
9.2 Beta function . . . 63
9.2.1 Definition . . . 63
9.2.2 Integral representations . . . 63
9.3 Solved exercises . . . 65

II Fundamentals of probability 71

10 Probability 73
10.1 Definition of probability . . . 73
10.2 Sample space, sample points and events . . . 73
10.3 Space of events . . . 74
10.4 Probability is defined by three properties . . . 75
10.5 Old definitions of probability . . . 77
10.5.1 Classical definition of probability . . . 77
10.5.2 Frequentist definition of probability . . . 77
10.5.3 Subjectivist definition of probability . . . 78
10.6 Properties of probability . . . 78
10.6.1 Probability of the empty set . . . 78
10.6.2 Additivity and sigma-additivity . . . 79
10.6.3 Probability of the complement . . . 79
10.6.4 Probability of a union . . . 79
10.6.5 Monotonicity of probability . . . 80
10.7 More rigorous definitions . . . 80
10.7.1 A more rigorous definition of event . . . 81
10.7.2 A more rigorous definition of probability . . . 82
10.8 Solved exercises . . . 82

11 Zero-probability events 85
11.1 Definition and discussion . . . 85
11.2 Almost sure and almost surely . . . 86
11.3 Almost sure events . . . 87
11.4 Solved exercises . . . 88

12 Conditional probability 91
12.1 Introduction . . . 91
12.2 The case of equally likely sample points . . . 91
12.3 A more general approach . . . 93
12.4 Tackling division by zero . . . 96
12.5 More details . . . 96
12.5.1 The law of total probability . . . 96
12.6 Solved exercises . . . 97

Copyrighted Material

13 Bayes' rule 101
13.1 Statement of Bayes' rule . . . 101
13.2 Terminology . . . 102
13.3 Solved exercises . . . 102

14 Independent events 105
14.1 Definition of independent event . . . 105
14.2 Mutually independent events . . . 106
14.3 Zero-probability events and independence . . . 107
14.4 Solved exercises . . . 107

15 Random variables 111
15.1 Definition of random variable . . . 111
15.2 Discrete random variables . . . 112
15.3 Absolutely continuous random variables . . . 113
15.4 Random variables in general . . . 114
15.5 More details . . . 115
15.5.1 Derivative of the distribution function . . . 115
15.5.2 Continuous variables and zero-probability events . . . 115
15.5.3 A more rigorous definition of random variable . . . 115
15.6 Solved exercises . . . 115

16 Random vectors 121
16.1 Definition of random vector . . . 121
16.2 Discrete random vectors . . . 122
16.3 Absolutely continuous random vectors . . . 123
16.4 Random vectors in general . . . 124
16.5 More details . . . 125
16.5.1 Random matrices . . . 125
16.5.2 Marginal distribution of a random vector . . . 125
16.5.3 Marginalization of a joint distribution . . . 126
16.5.4 Marginal distribution of a discrete random vector . . . 126
16.5.5 Marginalization of a discrete distribution . . . 126
16.5.6 Marginal distribution of a continuous random vector . . . 126
16.5.7 Marginalization of a continuous distribution . . . 127
16.5.8 Partial derivative of the distribution function . . . 127
16.5.9 A more rigorous definition of random vector . . . 127
16.6 Solved exercises . . . 127

17 Expected value 133
17.1 Definition of expected value . . . 133
17.2 Discrete random variables . . . 134
17.3 Continuous random variables . . . 135
17.4 The Riemann-Stieltjes integral . . . 136
17.4.1 Intuition . . . 137
17.4.2 Some rules . . . 138
17.5 The Lebesgue integral . . . 139
17.6 More details . . . 140
17.6.1 The transformation theorem . . . 140
17.6.2 Linearity of the expected value . . . 140
17.6.3 Expected value of random vectors . . . 142

Copyrighted Material

17.6.4 Expected value of random matrices . . . 142
17.6.5 Integrability . . . 142
17.6.6 L^p spaces . . . 142
17.6.7 Other properties of the expected value . . . 142
17.7 Solved exercises . . . 142

18 Expected value and the Lebesgue integral **147**
18.1 Intuition . . . 147
18.2 Linearity of the Lebesgue integral . . . 149
18.3 A more rigorous definition . . . 150

19 Properties of the expected value **153**
19.1 Linearity of the expected value . . . 153
19.1.1 Scalar multiplication of a random variable . . . 153
19.1.2 Sums of random variables . . . 153
19.1.3 Linear combinations of random variables . . . 154
19.1.4 Addition of a constant and a random matrix . . . 154
19.1.5 Multiplication of a constant and a random matrix . . . 155
19.2 Other properties . . . 156
19.2.1 Expectation of a positive random variable . . . 156
19.2.2 Preservation of almost sure inequalities . . . 156
19.3 Solved exercises . . . 157

20 Variance **161**
20.1 Definition of variance . . . 161
20.2 Interpretation of variance . . . 161
20.3 Computation of variance . . . 161
20.4 Variance formula . . . 162
20.5 Example . . . 162
20.6 More details . . . 163
20.6.1 Variance and standard deviation . . . 163
20.6.2 Addition to a constant . . . 163
20.6.3 Multiplication by a constant . . . 164
20.6.4 Linear transformations . . . 164
20.6.5 Square integrability . . . 165
20.7 Solved exercises . . . 165

21 Covariance **169**
21.1 Definition of covariance . . . 169
21.2 Understanding the definition . . . 169
21.3 Covariance formula . . . 170
21.4 Example . . . 170
21.5 More details . . . 171
21.5.1 Covariance of a random variable with itself . . . 172
21.5.2 Symmetry . . . 172
21.5.3 Bilinearity . . . 172
21.5.4 Variance of the sum of two random variables . . . 173
21.5.5 Variance of the sum of n random variables . . . 173
21.6 Solved exercises . . . 174

Copyrighted Material

22 Linear correlation **183**
22.1 Definition of linear correlation coefficient . . . 183
22.2 Interpretation . . . 183
22.3 Terminology . . . 184
22.4 Example . . . 184
22.5 More details . . . 186
22.5.1 Correlation of a random variable with itself . . . 186
22.5.2 Symmetry . . . 186
22.6 Solved exercises . . . 187

23 Covariance matrix **195**
23.1 Definition . . . 195
23.2 Structure of the covariance matrix . . . 195
23.3 Covariance matrix formula . . . 196
23.4 More details . . . 196
23.4.1 Addition to a constant vector . . . 196
23.4.2 Multiplication by a constant matrix . . . 197
23.4.3 Linear transformations . . . 197
23.4.4 Symmetry . . . 197
23.4.5 Semi-positive definiteness . . . 198
23.4.6 Covariance between linear transformations . . . 198
23.4.7 Cross-covariance . . . 198
23.5 Solved exercises . . . 199

24 Indicator function **203**
24.1 Definition . . . 203
24.2 Properties of the indicator function . . . 204
24.2.1 Powers . . . 204
24.2.2 Expected value . . . 204
24.2.3 Variance . . . 204
24.2.4 Intersections . . . 204
24.2.5 Indicators of zero-probability events . . . 205
24.3 Solved exercises . . . 205

25 Conditional probability as a random variable **207**
25.1 Partitions of events . . . 208
25.2 Probabilities conditional on a partition . . . 209
25.3 The fundamental property . . . 210
25.4 The fundamental property as a definition . . . 211
25.5 More details . . . 212
25.5.1 Conditioning with respect to sigma-algebras . . . 212
25.5.2 Regular conditional probabilities . . . 213

26 Conditional probability distributions **215**
26.1 Conditional probability mass function . . . 216
26.2 Conditional probability density function . . . 219
26.3 Conditional distribution function . . . 221
26.4 More details . . . 222
26.4.1 Conditional distribution of a random vector . . . 222
26.4.2 Joint equals marginal times conditional . . . 222
26.5 Solved exercises . . . 222

27 Conditional expectation **227**
27.1 Definition . . . 227
27.2 Discrete random variables . . . 227
27.3 Absolutely continuous random variables . . . 229
27.4 Conditional expectation in general . . . 230
27.5 More details . . . 231
27.5.1 Properties of conditional expectation . . . 231
27.5.2 Law of iterated expectations . . . 231
27.6 Solved exercises . . . 232

28 Independent random variables **235**
28.1 Definition . . . 235
28.2 Independence criterion . . . 235
28.3 Independence between discrete variables . . . 237
28.4 Independence between continuous variables . . . 238
28.5 More details . . . 239
28.5.1 Mutually independent random variables . . . 239
28.5.2 Mutual independence via expectations . . . 240
28.5.3 Independence and zero covariance . . . 240
28.5.4 Independent random vectors . . . 241
28.5.5 Mutually independent random vectors . . . 241
28.6 Solved exercises . . . 242

III Additional topics in probability theory **245**

29 Probabilistic inequalities **247**
29.1 Markov's inequality . . . 247
29.2 Chebyshev's inequality . . . 248
29.3 Jensen's inequality . . . 249
29.4 Solved exercises . . . 250

30 Legitimate probability mass functions **253**
30.1 Properties of probability mass functions . . . 253
30.2 Identification of a legitimate pmf . . . 254
30.3 Solved exercises . . . 255

31 Legitimate probability density functions **257**
31.1 Properties of probability density functions . . . 257
31.2 Identification of a legitimate pdf . . . 258
31.3 Solved exercises . . . 259

32 Factorization of joint probability mass functions **263**
32.1 The factorization . . . 263
32.2 A factorization method . . . 263

33 Factorization of joint probability density functions **267**
33.1 The factorization . . . 267
33.2 A factorization method . . . 267

Copyrighted Material

34 Functions of random variables and their distribution 271
34.1 Strictly increasing functions . . . 271
34.1.1 Strictly increasing functions of a discrete variable . . . 273
34.1.2 Strictly increasing functions of a continuous variable . . . 274
34.2 Strictly decreasing functions . . . 275
34.2.1 Strictly decreasing functions of a discrete variable . . . 276
34.2.2 Strictly decreasing functions of a continuous variable . . . 277
34.3 Invertible functions . . . 278
34.3.1 One-to-one functions of a discrete variable . . . 279
34.3.2 One-to-one functions of a continuous variable . . . 279
34.4 Solved exercises . . . 280

35 Functions of random vectors and their distribution 283
35.1 One-to-one functions . . . 283
35.1.1 One-to-one function of a discrete vector . . . 283
35.1.2 One-to-one function of a continuous vector . . . 284
35.2 Independent sums . . . 286
35.3 Known moment generating function . . . 287
35.4 Known characteristic function . . . 287
35.5 Solved exercises . . . 287

36 Moments and cross-moments 291
36.1 Moments . . . 291
36.1.1 Definition of moment . . . 291
36.1.2 Definition of central moment . . . 291
36.2 Cross-moments . . . 291
36.2.1 Definition of cross-moment . . . 291
36.2.2 Definition of central cross-moment . . . 293

37 Moment generating function of a random variable 295
37.1 Definition . . . 295
37.2 Moments and mgfs . . . 296
37.3 Distributions and mgfs . . . 297
37.4 More details . . . 299
37.4.1 Mgf of a linear transformation . . . 299
37.4.2 Mgf of a sum . . . 299
37.5 Solved exercises . . . 300

38 Moment generating function of a random vector 303
38.1 Definition . . . 303
38.2 Cross-moments and joint mgfs . . . 305
38.3 Joint distributions and joint mgfs . . . 306
38.4 More details . . . 307
38.4.1 Joint mgf of a linear transformation . . . 307
38.4.2 Joint mgf of a vector with independent entries . . . 308
38.4.3 Joint mgf of a sum . . . 308
38.5 Solved exercises . . . 309

Copyrighted Material

39 Characteristic function of a random variable 313
39.1 Definition . . . 313
39.2 Moments and cfs . . . 314
39.3 Distributions and cfs . . . 315
39.4 More details . . . 316
39.4.1 Cf of a linear transformation . . . 316
39.4.2 Cf of a sum . . . 316
39.4.3 Computation of the characteristic function . . . 317
39.5 Solved exercises . . . 318

40 Characteristic function of a random vector 321
40.1 Definition . . . 321
40.2 Cross-moments and joint cfs . . . 321
40.3 Joint distributions and joint cfs . . . 323
40.4 More details . . . 323
40.4.1 Joint cf of a linear transformation . . . 323
40.4.2 Joint cf of a random vector with independent entries . . . 324
40.4.3 Joint cf of a sum . . . 324
40.5 Solved exercises . . . 325

41 Sums of independent random variables 329
41.1 Distribution function of a sum . . . 329
41.2 Probability mass function of a sum . . . 331
41.3 Probability density function of a sum . . . 333
41.4 More details . . . 335
41.4.1 Sum of n independent random variables . . . 335
41.5 Solved exercises . . . 335

IV Probability distributions 339

42 Bernoulli distribution 341
42.1 Definition . . . 341
42.2 Expected value . . . 342
42.3 Variance . . . 342
42.4 Moment generating function . . . 342
42.5 Characteristic function . . . 343
42.6 Distribution function . . . 343
42.7 More details . . . 343
42.7.1 Relation to the binomial distribution . . . 343
42.8 Solved exercises . . . 343

43 Binomial distribution 347
43.1 Definition . . . 347
43.2 Relation to the Bernoulli distribution . . . 348
43.3 Expected value . . . 350
43.4 Variance . . . 350
43.5 Moment generating function . . . 351
43.6 Characteristic function . . . 352
43.7 Distribution function . . . 352
43.8 Solved exercises . . . 353

Copyrighted Material

44 Poisson distribution **355**
44.1 Definition . . . 356
44.2 Relation to the exponential distribution . . . 356
44.3 Expected value . . . 359
44.4 Variance . . . 359
44.5 Moment generating function . . . 360
44.6 Characteristic function . . . 361
44.7 Distribution function . . . 362
44.8 Solved exercises . . . 362

45 Uniform distribution **365**
45.1 Definition . . . 365
45.2 Expected value . . . 365
45.3 Variance . . . 366
45.4 Moment generating function . . . 367
45.5 Characteristic function . . . 367
45.6 Distribution function . . . 368
45.7 Solved exercises . . . 368

46 Exponential distribution **371**
46.1 Definition . . . 371
46.2 The rate parameter and its interpretation . . . 372
46.3 Expected value . . . 374
46.4 Variance . . . 374
46.5 Moment generating function . . . 375
46.6 Characteristic function . . . 375
46.7 Distribution function . . . 377
46.8 More details . . . 377
46.8.1 Memoryless property . . . 377
46.8.2 Sums of exponential random variables . . . 378
46.9 Solved exercises . . . 378

47 Normal distribution **381**
47.1 The standard normal distribution . . . 382
47.1.1 Definition . . . 382
47.1.2 Expected value . . . 383
47.1.3 Variance . . . 383
47.1.4 Moment generating function . . . 384
47.1.5 Characteristic function . . . 385
47.1.6 Distribution function . . . 386
47.2 The normal distribution in general . . . 387
47.2.1 Definition . . . 387
47.2.2 Relation to the standard normal distribution . . . 388
47.2.3 Expected value . . . 388
47.2.4 Variance . . . 388
47.2.5 Moment generating function . . . 389
47.2.6 Characteristic function . . . 389
47.2.7 Distribution function . . . 390
47.3 More details . . . 390
47.3.1 Multivariate normal distribution . . . 390

Copyrighted Material

47.3.2 Linear combinations of normal random variables 390
47.3.3 Quadratic forms involving normal random variables 391
47.4 Solved exercises 391

48 Chi-square distribution **393**
48.1 Definition 393
48.2 Expected value 394
48.3 Variance 394
48.4 Moment generating function 395
48.5 Characteristic function 396
48.6 Distribution function 397
48.7 More details 398
48.7.1 Sums of independent Chi-square random variables 398
48.7.2 Relation to the standard normal distribution 399
48.7.3 Relation to the standard normal distribution (2) 401
48.8 Solved exercises 401

49 Gamma distribution **403**
49.1 Definition 403
49.2 Expected value 404
49.3 Variance 404
49.4 Moment generating function 405
49.5 Characteristic function 406
49.6 Distribution function 408
49.7 More details 408
49.7.1 Relation to the Chi-square distribution 408
49.7.2 Multiplication by a constant 409
49.7.3 Relation to the normal distribution 410
49.8 Solved exercises 410

50 Student's t distribution **413**
50.1 The standard Student's t distribution 413
50.1.1 Definition 414
50.1.2 Relation to the normal and Gamma distributions 414
50.1.3 Expected value 416
50.1.4 Variance 417
50.1.5 Higher moments 419
50.1.6 Moment generating function 420
50.1.7 Characteristic function 420
50.1.8 Distribution function 420
50.2 The Student's t distribution in general 421
50.2.1 Definition 421
50.2.2 Relation to the standard Student's t distribution 421
50.2.3 Expected value 422
50.2.4 Variance 422
50.2.5 Moment generating function 422
50.2.6 Characteristic function 423
50.2.7 Distribution function 423
50.3 More details 423
50.3.1 Convergence to the normal distribution 423

50.3.2 Non-central t distribution 424
50.4 Solved exercises 424

51 F distribution **427**
51.1 Definition 427
51.2 Relation to the Gamma distribution 428
51.3 Relation to the Chi-square distribution 430
51.4 Expected value 431
51.5 Variance 432
51.6 Higher moments 433
51.7 Moment generating function 434
51.8 Characteristic function 434
51.9 Distribution function 434
51.10Solved exercises 435

52 Multinomial distribution **437**
52.1 The special case of one experiment 437
52.1.1 Definition 437
52.1.2 Expected value 438
52.1.3 Covariance matrix 438
52.1.4 Joint moment generating function 439
52.1.5 Joint characteristic function 439
52.2 Multinomial distribution in general 440
52.2.1 Definition 440
52.2.2 Representation as a sum of simpler multinomials 440
52.2.3 Expected value 441
52.2.4 Covariance matrix 441
52.2.5 Joint moment generating function 442
52.2.6 Joint characteristic function 442
52.3 Solved exercises 443

53 Multivariate normal distribution **445**
53.1 The standard MV-N distribution 445
53.1.1 Definition 445
53.1.2 Relation to the univariate normal distribution 446
53.1.3 Expected value 447
53.1.4 Covariance matrix 447
53.1.5 Joint moment generating function 448
53.1.6 Joint characteristic function 448
53.2 The MV-N distribution in general 449
53.2.1 Definition 449
53.2.2 Relation to the standard MV-N distribution 450
53.2.3 Expected value 451
53.2.4 Covariance matrix 451
53.2.5 Joint moment generating function 451
53.2.6 Joint characteristic function 452
53.3 More details 452
53.3.1 The univariate normal as a special case 452
53.3.2 Mutual independence and joint normality 452
53.3.3 Linear combinations and transformations 453

70.2 The theorem . . . 565
70.2.1 Implications . . . 566
70.3 Solved exercises . . . 566

VII Fundamentals of statistics 569

71 Statistical inference 571
71.1 Samples . . . 571
71.2 Statistical models . . . 573
71.2.1 Parametric models . . . 573
71.3 Statistical inference . . . 574
71.4 Decision theory . . . 575

72 Point estimation 577
72.1 Estimate and estimator . . . 577
72.2 Estimation error, loss and risk . . . 577
72.3 Other criteria to evaluate estimators . . . 579
72.3.1 Unbiasedness . . . 579
72.3.2 Consistency . . . 579
72.4 Examples . . . 580

73 Point estimation of the mean 581
73.1 Normal IID samples . . . 581
73.1.1 The sample . . . 581
73.1.2 The estimator . . . 581
73.1.3 Expected value of the estimator . . . 581
73.1.4 Variance of the estimator . . . 582
73.1.5 Distribution of the estimator . . . 582
73.1.6 Risk of the estimator . . . 583
73.1.7 Consistency of the estimator . . . 583
73.2 IID samples . . . 583
73.2.1 The sample . . . 583
73.2.2 The estimator . . . 584
73.2.3 Expected value of the estimator . . . 584
73.2.4 Variance of the estimator . . . 584
73.2.5 Distribution of the estimator . . . 584
73.2.6 Risk of the estimator . . . 584
73.2.7 Consistency of the estimator . . . 585
73.2.8 Asymptotic normality . . . 585
73.3 Solved exercises . . . 585

74 Point estimation of the variance 587
74.1 Normal IID samples - Known mean . . . 587
74.1.1 The sample . . . 587
74.1.2 The estimator . . . 587
74.1.3 Expected value of the estimator . . . 588
74.1.4 Variance of the estimator . . . 588
74.1.5 Distribution of the estimator . . . 589

Copyrighted Material

74.1.6 Risk of the estimator . . . 589
74.1.7 Consistency of the estimator . . . 590
74.2 Normal IID samples - Unknown mean . . . 590
74.2.1 The sample . . . 590
74.2.2 The estimator . . . 590
74.2.3 Expected value of the estimator . . . 591
74.2.4 Variance of the estimator . . . 593
74.2.5 Distribution of the estimator . . . 593
74.2.6 Risk of the estimator . . . 595
74.2.7 Consistency of the estimator . . . 596
74.3 Solved exercises . . . 597

75 Set estimation **599**
75.1 Confidence set . . . 599
75.2 Coverage probability - confidence coefficient . . . 600
75.3 Size of a confidence set . . . 600
75.4 Other criteria to evaluate set estimators . . . 601
75.5 Examples . . . 601

76 Set estimation of the mean **603**
76.1 Normal IID samples - Known variance . . . 603
76.1.1 The sample . . . 603
76.1.2 The interval estimator . . . 603
76.1.3 Coverage probability . . . 604
76.1.4 Confidence coefficient . . . 604
76.1.5 Size . . . 605
76.1.6 Expected size . . . 605
76.2 Normal IID samples - Unknown variance . . . 605
76.2.1 The sample . . . 605
76.2.2 The interval estimator . . . 605
76.2.3 Coverage probability . . . 606
76.2.4 Confidence coefficient . . . 609
76.2.5 Size . . . 609
76.2.6 Expected size . . . 610
76.3 Solved exercises . . . 611

77 Set estimation of the variance **615**
77.1 Normal IID samples - Known mean . . . 615
77.1.1 The sample . . . 615
77.1.2 The interval estimator . . . 615
77.1.3 Coverage probability . . . 616
77.1.4 Confidence coefficient . . . 616
77.1.5 Size . . . 617
77.1.6 Expected size . . . 617
77.2 Normal IID samples - Unknown mean . . . 617
77.2.1 The sample . . . 617
77.2.2 The interval estimator . . . 618
77.2.3 Coverage probability . . . 618
77.2.4 Confidence coefficient . . . 619
77.2.5 Size . . . 619

78 Hypothesis testing **623**
78.1 Null hypothesis . . . 624
78.2 Alternative hypothesis . . . 624
78.3 Types of errors . . . 624
78.4 Critical region . . . 625
78.5 Test statistic . . . 625
78.6 Power function . . . 626
78.7 Size of a test . . . 626
78.8 Criteria to evaluate tests . . . 627
78.9 Examples . . . 627

79 Hypothesis tests about the mean **629**
79.1 Normal IID samples - Known variance . . . 629
79.1.1 The sample . . . 629
79.1.2 The null hypothesis . . . 629
79.1.3 The alternative hypothesis . . . 630
79.1.4 The test statistic . . . 630
79.1.5 The critical region . . . 630
79.1.6 The power function . . . 630
79.1.7 The size of the test . . . 631
79.2 Normal IID samples - Unknown variance . . . 631
79.2.1 The sample . . . 631
79.2.2 The null hypothesis . . . 632
79.2.3 The alternative hypothesis . . . 632
79.2.4 The test statistic . . . 632
79.2.5 The critical region . . . 632
79.2.6 The power function . . . 633
79.2.7 The size of the test . . . 635
79.3 Solved exercises . . . 636

80 Hypothesis tests about the variance **639**
80.1 Normal IID samples - Known mean . . . 639
80.1.1 The sample . . . 639
80.1.2 The null hypothesis . . . 639
80.1.3 The alternative hypothesis . . . 640
80.1.4 The test statistic . . . 640
80.1.5 The critical region . . . 640
80.1.6 The power function . . . 640
80.1.7 The size of the test . . . 641
80.2 Normal IID samples - Unknown mean . . . 641
80.2.1 The sample . . . 641
80.2.2 The null hypothesis . . . 641
80.2.3 The alternative hypothesis . . . 642
80.2.4 The test statistic . . . 642
80.2.5 The critical region . . . 642
80.2.6 The power function . . . 642
80.2.7 The size of the test . . . 643
